

ACADEMIC YEAR 2025–29

Final Internship Report on SAP FICO

Financial Accounting and Controlling

Submitted in partial fulfilment of the requirements of the
undergraduate/graduate programme

Internship Overview

Student Details

Name: Ashish Kumar

Roll No.: 25SCS1003003125

Course: B.Tech (CSE)

Semester: 3rd Sem

Dept.: Computer Science and Engineering (CSE)

Institution: IILM UNIVERSITY GREATER NOIDA

Internship Details

Organisation: Yuva Intern

Domain: SAP FICO

Duration: 6 Weeks

Start Date: August 24, 2026

End Date: October 05, 2026

Faculty Guide: Apoorva Jain

Industry Mentor: Kounal Gupta

Week 1

SAP FICO Fundamentals

Week 2

Configuration

Week 3

Case Study

Week 4

Reporting

Week 5

Troubleshooting

Week 6

Future Trends

About SAP and ERP

ERP (Enterprise Resource Planning) integrates core business processes into a unified system. **SAP SE**, founded in 1972 in Germany, is the world's leading ERP provider. SAP FICO — Financial Accounting (FI) and Controlling (CO) — forms the financial backbone of SAP ERP, managing external reporting and internal cost control.

Financial Accounting (FI)

Records all financial transactions for external reporting — Balance Sheet, P&L, and statutory compliance.

Controlling (CO)

Supports internal management decisions through cost centre accounting, profit centre analysis, and profitability reporting.

FI-CO Integration

Financial postings in FI automatically update CO, ensuring real-time consistency between external and internal records.

SAP FICO Structure and Integration

Key Integration Points

- **MM → FI:** Goods receipt and invoice verification post automatically to G/L and AP
- **SD → FI:** Billing documents update AR and revenue accounts
- **PP → CO:** Production orders collect and settle actual costs
- **HCM → FI:** Payroll results post to G/L cost accounts

📌 In SAP S/4HANA, the **Universal Journal (ACDOCA)** consolidates all FI and CO postings into a single table, eliminating reconciliation between modules.

Week 2 – SAP FICO Configuration

Configuration defines how SAP behaves for a specific organisation without modifying source code. I studied the end-to-end setup flow from enterprise structure to module-specific settings.

Each phase builds on the previous — the enterprise structure must be defined before sub-module settings can be assigned.

Configuration Element	FI Area	CO Area
Company Code	✓ Legal entity for external reporting	—
Controlling Area	—	✓ Internal cost management unit
Chart of Accounts	✓ Master list of G/L accounts	✓ Referenced for cost elements
Fiscal Year Variant	✓ Defines posting periods	✓ Must align with FI
Currency	✓ Local and group currency	✓ Inherits from company code

Week 3 — Real-World Case Study: Larsen & Toubro

Company Background

Larsen & Toubro (L&T) is an Indian multinational in engineering, construction, and technology. Listed on NSE/BSE, L&T operates across 30+ countries. SAP implementation details are documented in **SAP's official customer story** and L&T's annual reports.

Challenges Before SAP

- Fragmented financial systems across business units
- Delayed consolidation and month-end closing
- Limited real-time cost visibility for projects
- Manual reconciliation between finance and operations

SAP Solution

SAP ERP with FI, CO, MM, SD, PP, and PS modules; later migrated toward S/4HANA for real-time analytics.

Business Impact

Improved financial consolidation, project cost tracking, and compliance reporting. Specific metrics should be verified from SAP's official customer story.

Lessons Learned

Change management, data quality, and phased rollout are critical success factors in large-scale SAP implementations.

Week 4 — SAP FICO Reporting

SAP FICO reporting supports both external statutory requirements and internal management decisions. In S/4HANA, the Universal Journal enables a single source of truth for all financial reports.

Financial Accounting Reports

- **General Ledger:** Trial Balance, G/L Account Balance, Financial Statement Version
- **AP/AR:** Open Item Management, Age Analysis, Vendor/Customer Line Items
- **Asset Accounting:** Asset History Sheet, Depreciation Reports
- **Statutory:** Balance Sheet, Profit & Loss Statement

Controlling Reports

- **Cost Center:** Actual vs. Plan, Cost Element Reports
- **Profit Center:** Segment reporting, P&L by responsibility
- **Internal Orders:** Order settlement, budget vs. actual
- **CO-PA:** Profitability by product, customer, or region

 SAP Fiori apps and embedded analytics in S/4HANA enable real-time reporting without separate data extraction.

Week 5 — Common Issues and Troubleshooting

Troubleshooting in SAP FICO follows a structured methodology: identify the symptom, trace the transaction, check master data and configuration, then validate authorisations. I studied common error categories and systematic resolution approaches.

Issue Category	Common Cause	Resolution Approach
G/L Posting Error	Closed posting period or wrong account type	Open period via OB52; verify account master
AP/AR Discrepancy	Un cleared items or duplicate invoices	Run open item report; use F-03/F-04 to clear
FI-CO Mismatch	Cost element not created or inactive	Create primary/secondary cost element in KA01
Integration Failure	MM-FI or SD-FI account determination error	Check OBYC/VKOA configuration tables
Authorisation Error	Missing role or activity group	Coordinate with Basis team; review SU53 log

Week 6 — Future of SAP FICO

SAP S/4HANA Cloud

Cloud-native deployments reduce infrastructure costs and enable continuous updates. Finance processes become more agile and scalable.

Real-Time Analytics

Embedded analytics in S/4HANA eliminate batch processing. Managers access live financial data through SAP Fiori dashboards.

AI and Automation

SAP's AI capabilities automate reconciliations, anomaly detection, and predictive forecasting, reducing manual effort in finance teams.

Extended Integration

SAP Finance increasingly integrates with non-SAP systems via APIs, supporting hybrid landscapes and third-party fintech solutions.

Capability	Traditional SAP ECC	SAP S/4HANA
Data Model	Multiple tables (BKPF, BSEG, COEP)	Single table: ACDOCA
Reporting	Batch-based, separate CO/FI reports	Real-time, unified Universal Journal
Deployment	On-premise only	On-premise, cloud, or hybrid
UI	SAP GUI	SAP Fiori (role-based, responsive)

Personal Learning, Reflection and Conclusion

My Learning Journey

Over six weeks, my understanding evolved from basic ERP concepts to a structured grasp of SAP FICO's architecture, configuration logic, and business relevance. The L&T case study connected theory to real-world implementation challenges. I now understand how FI and CO integrate, why the Universal Journal matters, and what skills SAP FICO professionals need.

Skills Developed

- Conceptual understanding of FI, CO, and their integration
- Configuration principles and enterprise structure design
- Financial and management reporting frameworks
- Systematic troubleshooting methodology
- Awareness of S/4HANA and future SAP trends

Conclusion

SAP FICO remains central to enterprise finance. As organisations adopt S/4HANA, professionals who understand both traditional concepts and modern capabilities will be in high demand. This internship provided a strong academic foundation for pursuing SAP FICO certification and a career in enterprise finance technology.
